

HDP-CVD DEPOSITION PROCESS FOR FILLING HIGH ASPECT RATIO GAPS

ABSTRACT OF THE DISCLOSURE

- 5 A method for forming a silicon oxide layer over a substrate disposed in a high density plasma substrate processing chamber. The method includes flowing a process gas that includes a silicon-containing source, an oxygen-containing source and a fluorine-containing source into the substrate processing chamber and forming a plasma from said process gas. The substrate is heated to a temperature above 450°C during deposition of said silicon oxide layer and the deposited layer has a fluorine
- 10 content of less than 1.0 atomic percent.
